World Leader in Speciality Viscose Fibres
We are a medium-sized fibre manufacturer in Southern Germany with 500 employees and an annual production of 90,000 tonnes of viscose speciality fibres. Our vision is to be the world’s leading producer of viscose speciality fibres for a broad spectrum of applications and markets.
World leader in tampon fibres

Galaxy® is the world’s leading hygiene fibre made of 100% cellulose for all areas where increased absorbency is required. In medical applications and in personal hygiene products technical performance is essential – but our record in supplying consistency, safety and reliability is equally significant.
World leader in speciality viscose fibres

Our viscose speciality products are used in a wide range of products: They offer solutions for speciality papers, filtration, technical textiles, flock, carbonization and many other applications. Their unrivalled properties create added value for our customers.
Quality – our number one priority

We have been supplying viscose fibres for more than 75 years, and our customers know they can rely on the quality of our products. Through constant product development we add new functionalities to our fibres, while maintaining product quality and delivering outstanding performance properties in their products.
Going green? We are – by nature

Cellulose is nature’s high-performance material and the natural raw material for our fibres. The wood pulp we use carries the highly regarded seal of the FSC® or is certified to the PEFC™ standard, both of which certify sustainable forestry. All our viscose fibres are fully biodegradable and therefore represent a sustainable alternative to crude-oil-based materials.
Environmental responsibility

We use raw materials that are certified for sustainability, closed production loops with highly effective recovery rates and operate a power house that runs at an efficiency rate of over 90%. Our patented technology for waste water treatment was developed in Kelheim. For us, protecting the environment is not only important – it is a core competence.

Our focus is on continuously developing new ideas in order to meet the needs of our customers. By modifying our fibre products we are able to create new specialities with intrinsic product properties – for both existing and new markets.
The key to our innovation skills is our long history of R&D in cellulose fibres. In our in-house pilot plants we can apply and test these new specialities according to the demand of your specific application.
Meeting your needs

Our new fibre developments are the basis for innovative tailor-made solutions designed to meet your individual requirements.
We are eager to learn about your requirements and objectives. And we look forward to working together with you in close cooperation to meet your needs.
